About Me

I am Arkit Karmokar, a Full Stack Developer. My expertise is building in SaaS platforms and distributed systems. From building advanced automation platforms that solve direct business friction to optimizing high-throughput internal infrastructure, I focus on shipping high-impact tools that perform smoothly under load and adapt gracefully within modern enterprise ecosystems.

Experience

Optiminastic • Full Stack Developer

Feb 2026 - Present • Remote

I built an enterprise internal HR Management Platform to streamline corporate recruitment lifecycle workflows, candidate tracking, and automated onboard processing pipelines. Alongside this, I engineered a full-stack SaaS engine monitoring website visibility footprints across multi-model AI search landscapes including ChatGPT, Perplexity, and Gemini. To drive automated optimization, I built custom integration engines and webhook frameworks via Shopify Remix Apps and WordPress Plugins to execute native visibility auto-fixes directly on production environments. The back-end data analytics pipeline was completely architected using Python/Django and Next.js, leveraging Celery task brokers and persistent PostgreSQL layers to optimize deep scanning processes.

Cinamate AI • Founding Engineer / Consultant

Sept 2025 - Jan 2026 • Andheri, Mumbai

I co-designed a high-growth filmmaking discovery platform empowering creator networks and modern media production pipelines. During this tenure, I built high-performance Next.js backend infrastructure running server-side rendering (SSR) integrated with optimized PostgreSQL schemas, index models, and connection pool topologies. Additionally, I developed operational RAG (Retrieval-Augmented Generation) pipelines using LangChain to generate document embeddings, manage real-time vector storage indexing, and supply semantic capabilities to the platform.

Projects

WindbackAI • Lead Architect

March 2026 • Personal SaaS Venture

I developed a specialized B2B retention platform designed to minimize subscription churn and recover failed transaction revenues automatically. I built an intelligent dunning transaction engine using autonomous AI models to generate personalized win-back customer sequences. I also hardened core cluster security by encrypting PII attributes at rest, configuring strict Role-Based Access Controls (RBAC), and implementing API token rate-limiting. The application was fully containerized with Docker, scaling asynchronous worker threads using Redis persistent job queues on Render.

BrowzyAI • Open Source Maintainer

Mar - Apr 2025 • Global Community

I designed and launched a downloadable browser extension that enhances day-to-day navigation using custom-tailored companion tools. I tied lightweight JavaScript extension layers into scalable Python background systems utilizing direct Gemini API orchestration structures, implementing native Natural Language Understanding (NLU) mechanics that accelerated task performance speeds by 30%.

Cohort

100xdevs Ecosystem • Full Stack Cohort

Ongoing Production Mastery • Harkirat Singh Ecosystem

Advanced production execution framework targeting Next.js (TypeScript), PostgreSQL, Docker workflows, scalable AWS server clusters, and highly performant Web3 applications built via Blockchain and Solana environments.

Education

University of Mumbai

Bachelor of Science in Information Technology

Apr 2021 - May 2024 • Mumbai, India

Coursework: Data Structures, Algorithms, Computer Systems, Software Engineering, Database Systems.

Technical

JavaScript	React.js & Next.js	PostgreSQL & MongoDB
TypeScript	Node.js & Express.js	Docker Containers
Python	Bun.js & Hono.js	AWS Infrastructure
HTML / CSS	Django Framework	Redis & Celery

Systems

System Design
RAG Architecture

LLM Integration
Churn Mitigation

HRMS Infrastructure
Agile Sprints
